

Student Answer Sheet

Name: Priya Singh | ID: STU002

Subject: Science | Class: 10A | Practice Test

Q1:

Photosynthesis is the process by which plants use sunlight, water and carbon dioxide to make glucose and release oxygen. It occurs in chloroplasts.

Q2:

Newton second law says acceleration is proportional to force and inversely proportional to mass. $F = ma$.

Q3:

DNA double helix structure made of nucleotides. Each nucleotide has sugar, phosphate and base. Bases pair: A-T and G-C.

Q4:

Mitosis produces 2 identical diploid cells for growth. Meiosis produces 4 haploid cells for reproduction. Meiosis has two divisions.

Q5:

Water cycle: evaporation from water bodies, transpiration from plants, condensation forms clouds, precipitation as rain or snow, collection in rivers and oceans.

Q6:

Heart has 4 chambers: 2 atria and 2 ventricles. Has valves to prevent backflow. Pumps blood through pulmonary and systemic circulation.
